## **PREFACE**

This report is based on the data collected in schedule 1.0 of 56th round (July, 2000 - June, 2001) of National Sample Survey on the subject 'Household Consumer Expenditure'. In this report, an attempt has been made to study the living status of the persons in the rural and urban areas of the State.

Six	Comparative picture of some important characteristics based on the state sample results of earlier round and 56th round	15
Seven	Employment and Unemployment situation	17
Appendix	List of tables	21

## Chapter - One INTRODUCTION

1.0 Beginning from the first round (1950-51) of the National Sample Survey (NSS), data on household consumer expenditure were collected in every round up to the 28th (1973-74) round survey. After the 26th round of the survey, the Governing Council of NSSO decided that the surveys on consumer expenditure and employment situation might be undertaken together on a large scale once in every five years. Accordingly, "quinquennial" surveys on consumer expenditure and employment surveys were conducted in the 27th, 32nd, 38th, 43rd, 50th and 55th rounds of NSS, at roughly 5 year intervals and "Annual" Surveys in the 42nd, 44th to 49th, 51st to 54th and 56th rounds of NSS. In these quinquennial rounds both survey schedules - Sch.1.0 dealing with household consumer expenditure and Sch.10, with employment-unemployment - were canvassed. For some years, the two schedules were canvassed in the same sample households, that is, households interviewed for Sch.1.0 were also interviewed during the same visit for Sch.10. From the 55th round (1999-2000) onwards, this linkage was withdrawn to avoid a very long interview.

1.1 **Annual series:** The need for an annual series of data on consumer expenditure was also felt in the mid-80's by planners and research workers. The Governing Council therefore decided, that (i) the quinquennial consumer expenditure-cum-employment surveys would be carried on as before and (ii) every other round of NSS, starting from the 42nd (1986-87), would include a consumer expenditure enquiry with 2 (increased to 4 from 1993 onwards) sample households per sample village/block with a slightly abridged version of Sch.1.0. From the 45th round, it was decided to extend the scope of this "annual" survey on consumer expenditure enquiry on a reduced scale by introducing some important questions on activity status of household members in Sch.1.0 so as to be able to generate some indicators on employment and unemployment as well. In each round since the 42nd, the duration of field investigation has been

one year except for the 47th, 49th and 54th rounds, which were of six month's duration. The Government of Maharashtra participates in these rounds on a matching sample basis independently.

1.2 The present report based on State sample gives the results of the 56th round survey (July 2000 - June 2001) on "Consumer Expenditure". In the 56th round of NSS, the main enquiry was on 'Unorganised Manufacturing' In addition, Sch.1.0 was canvassed in 4 sample households per sample village/block.

1.3 **Survey period and reference period:** The field work of the 56th round survey was carried out during the period July, 2000 to June, 2001. The reference period for collection of data on 'Consumer Expenditure' was 30 days preceding the date of survey alongwith 365 days duration were used for different groups of items.

1.4 **Geographical coverage:** The geographical coverage of the survey for the State sample was entire rural and urban areas of Maharashtra.

1.5 **Sample size:** The survey data collected through sch.1.0 of 56th round covered about 7,296 households spread over 288 Rural and 1,536 Urban blocks.

1.6 **Contents of the report:** Concepts and definitions are given in Chapter two. Sample design and Estimation procedure is given in chapter 3. Chapter 4 deals with main findings of the survey. Comparative picture in respect of some of the important characteristics of the Central and State sample estimates is shown in chapter 5. Chapter 6 presents comparative picture of some important characteristics based on the State sample results of earlier rounds and 56th round. The employment and unemployment situation is discussed in Chapter 7. The detailed tables are shown in Appendix-I.

## Chapter - Two

### CONCEPTS AND DEFINITIONS

2.0 Some of the concepts & definitions used in the survey are given below.

2.1 **Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word “normally” means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host’s household. “Living together” is usually given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person’s family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

2.2 **Adult:** A person who has completed 15 years of age.

2.3 **Household size:** The size of a household is the total number of persons in the household.

2.4 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household’s consumer expenditure. Household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

2.5 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and

footwear was considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipt in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex-farm or ex-factory rate. For evaluating the consumption of the items of group (iii), i.e., items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the expenditure made during the reference period for the purchase of goods and services is considered as consumption.

2.6 **Monthly per capita consumer expenditure (MPCE):** For a household, this is its total consumer expenditure divided by its size and expressed on a per month basis. A person’s MPCE is understood as that of the household to which he or she belongs.

2.7 **Reference period:** The reference periods used for collection of consumption data for different groups of items are given below:

- (i) Food, pan, tobacco and intoxicants, fuel & light, miscellaneous goods & services, and medical care (non-institutional). last 30 days
- (ii) Education, medical care (institutional), clothing, footwear and durable goods. last 365 days

2.8 **Milk and milk products:** This include ghee, butter, curd, ice-cream etc. Milk-based sweetmeats (pera, rosogolla etc.) come under” beverages, refreshments and processed food” unless they are prepared from milk, sugar, etc. within the household. In the latter case, consumption of milk, sugar, etc. are accounted separately instead of the entire consumption being accounted under “milk products.”

2.9 **Clothing and footwear:** This category includes bedsheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and mattings, cotton

yarn, wool, and knitting wool. It, however, excludes tailoring charges, which come under “miscellaneous goods and services.”

2.10 **Miscellaneous goods and services:** This is a residual group containing items other than food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, rent, taxes and durable goods.

2.11 **Durable goods:** Items included here are distinguished from miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs, and purchase and construction of durables used for domestic purpose is included in “expenditure on durable goods”.

2.12 **Katcha:** A katcha structure is one whose walls and roof are made of mud, bamboo, grass, leaves, reeds, thatch or unburnt bricks.

2.13 **Pucca:** A pucca structure is one whose walls and roof are made of burnt bricks, stone, cement, concrete, jackboard (cement-plastered reeds) and timber. Tiles, galvanised tin or asbestos cement sheets used in construction of roofs are regarded as pucca materials.

2.14 **Semi-pucca:** A semi-pucca structure is one of which either the roof or the walls but not both is made of pucca materials like burnt bricks, stone, cement, concrete or timber.

2.15 **Chawl/bustee:** A chawl/bustee is a collection of huts (thatched houses or huts) or tenements which is generally constructed of katcha or semi-pucca materials like mud, bamboo, grass, leaves, reeds, thatch, unburnt bricks etc., and is inhabited by a large number of households.

2.16 **Independent house:** An independent house is one which has a separate structure and entrance with self-contained arrangements. In other words, if the dwelling unit and the entire structure of the house are physically the same, it is considered as an independent house. Here dwelling unit means living rooms, kitchen, bathroom, latrine, store-room, verandah (both open and closed).

2.17 **Flat:** A flat, generally, is a part of a building and has one or more rooms with self-contained arrangements and normal housing facilities like water supply, latrine, toilet etc., which are used exclusively by the family residing therein or jointly with other families. It also includes detached room or rooms with or without other housing facilities.

## Chapter-Three

### SAMPLE DESIGN AND ESTIMATION PROCEDURE

3.0 **Introduction:** The NSS 56th round was focused on unorganised manufacturing enterprises. In addition, the annual consumer expenditure enquiry covering some key characteristics of employment-unemployment was conducted, on a thin sample of four households in each sample village/block.

3.1 **Period of survey and work programme:** The fieldwork of the fifty-sixth round commenced on 1st July, 2000 and ended on 30th June, 2001. The survey period of this round was divided into four sub-rounds of three months duration each as follows:

sub-round no.	period of survey
1	July-September 2000
2	October-December 2000
3	January-March 2001
4	April-June 2001

Equal number of sample FSUs was allotted for survey in each of these four sub-rounds.

3.2 **Sample design in outline:** A stratified multi-stage sample design was adopted with villages /UFS blocks as the first stage units (FSUs) and manufacturing enterprises (OAME/NDME/DMEs) in the unorganised sector as the ultimate stage units (USUs). For consumer expenditure and employment-unemployment survey, however, households were the USUs.

3.3 **Stratification: Rural:** Each district has been treated as a stratum for all States/UTs.

sub-stratum 1:	FSUs with no unorganised manufacturing enterprises
sub-stratum 2:	FSUs with at least one DME in the unorganised sector
sub-stratum 3:	remaining FSUs

Formation of a sub-stratum has been considered only when there were at least 20 FSUs in that sub-stratum; otherwise that particular sub-stratum was not formed and merged with other sub-stratum as per the following working rule:

Sub-stratum 1 (sub-stratum 3) with less than 20 FSUs has been merged with sub-stratum 3 (sub-stratum 1). Sub-stratum 2 with less than 8 FSUs has been merged with sub-stratum 3. In case of merger of two or more sub-strata, the FSUs have been identified with the sub-stratum having larger number of FSUs.

Formation of a sub-stratum has been considered only when there were at least 20 FSUs in that sub-stratum; otherwise no sub-stratification has been effected and all FSUs in this case have been taken to belong to sub-stratum 2 for facilitating processing work only.

**Urban:** Strata have been formed within each NSS region of a State/UT. The towns within an NSS region have been grouped to form strata according to the population of the towns as per 1991 population Census as given below (P stands for population of '91 census):

- i) Stratum 1: all towns with  $P \leq 50000$
- ii) Stratum 2: all towns with  $50000 < P \leq 100000$
- iii) Stratum 3: all towns with  $100000 < P \leq 500000$
- iv) Stratum 4: all towns with  $500000 < P \leq 1000000$
- v) Stratum 5/6/7: Each town with  $P > 1000000$

Within each stratum, three sub-strata have been formed based on EC-98 information as under:

sub-stratum 1:	FSUs with no unorganised manufacturing enterprises
sub-stratum 2:	FSUs with at least one DME in the unorganised sector
sub-stratum 3:	remaining FSUs

Sub-stratum 1 (sub-stratum 3) with less than 20 FSUs has been merged with sub-stratum 3 (sub-stratum 1) and has been identified with the sub-stratum 3 (sub-stratum 1). Sub-stratum 2 with less than 8 FSUs has been merged with sub-stratum 3. In case of merger of two or more sub-strata, the

FSUs have been identified with the sub-stratum having larger number of FSUs.

Priority order that has been followed in including a 'mixed area' type FSU e.g. IA and BA, BA and RA (i.e. Residential Area), etc. in sub-strata is IA and then BA e.g. an FSU identified as both IA and BA is included in sub-stratum 1.

Sub-stratum with less than 20 FSUs has been merged with other sub-stratum under a working rule as given below:

Sub-stratum 1 is to be merged with sub-stratum 2 if the latter has already been formed; otherwise sub-stratum 1 is to be merged with sub-stratum 3.

**3.4 Allocation between rural and urban sectors:** The allocation of FSUs between rural and urban sectors was made in proportion to the number of workers engaged in unorganised non-agricultural enterprises as per EC'98 with 1.5 weightage to Urban sector.

**3.5 Allocation among strata/sub-strata:** Allocations to strata/sub-strata in both rural and urban sectors were made in proportion to the number of non-agricultural workers in the unorganised sector as per EC'98.

Allocation to any stratum/sub-stratum was adjusted to a multiple of 2 FSUs. (When the proportional allocation turned out to be less than three, it was adjusted to 2. When the allocation was greater than or equal to 3 but less than 5, it was adjusted to 4 and so on.)

While allocating FSUs to stratum/sub-stratum the representation of each (stratum x sub-stratum x sub-sample) was ensured.

**3.6 Selection of FSUs:** For sub-stratum 1 of each stratum in rural/urban sector of each State/UT. FSUs have been selected by simple random sampling without replacement (SRSWOR). For all other sub-strata in both rural and urban sectors, FSUs have been selected circular systematically (CSS) with probability proportional to size (PPS), size being the number of manufacturing workers in the unorganised sector as per EC '98. For an FSU with no manufacturing worker, size 1 has been assigned to that FSU before drawing samples.

However, some manufacturing enterprises have been found to have large number of workers as per EC '98 frame even though they are in the unorganised sector. Some adjustment to the size of workers for such enterprises has, therefore, been made before calculating the size of FSUs. For this purpose, any unorganised manufacturing enterprise having more than 200 workers has been deemed to have size equal to 200. Enterprise sizes have been thereafter added up to get the FSU size and sub-stratum/stratum size.

Sample FSUs have been drawn in the form of two independent sub-samples in both the sectors. However, for sub-strata 2 and 3 of both the sectors, a little modification in the usual procedure for CSS PPS scheme was made at the selection stage so that repetition of FSU within a sub-sample or between sub-samples could be avoided. The modification was as follows:

In any cycle of CSS, if the selected FSU was found to be already present in the sample (either in the first or in the second sub-sample), it was skipped and next cycle was executed by adding the sampling interval in order to select a fresh FSU. As a result, all the selected FSUs in the two sub-samples taken together were distinct for the sub-stratum. In some sub-strata where there were some big-sized FSUs, the procedure did not result in selection of required number of distinct FSUs because a situation was encountered where the sample FSUs were repeated again and again even after adding the sampling interval. In a few such cases, where a fresh FSU was not found even after 20 cycles, the first unselected FSU obtained by scanning the sub-stratum from the top of the frame was selected. In Central sample, the selection of samples for 1st sub-sample was completed first and then the FSUs of 2nd sub-sample were drawn. In case of State sample, sampling was done independently of Central sample. But within the state sample, the procedure of selection was same as in the case of Central sample. It may be noted that in view of the above modification, the two sub-samples are no more independent.

For uniform spread of field work over the survey period all the sample FSUs pertaining to a State/UT have been arranged, separately for central sample and state sample, first by stratum and then each stratum by sub-stratum and each sub-stratum by sub-sample and then sub-round number has been assigned against sample FSUs in the sequence 1,2,3,4.

**3.7 Formation of hamlet-group/sub-block:** Hamlet-group/sub-block (hg/sb) was formed in large FSUs by considering the population and enterprise criteria as indicated below:

The higher of the two values as per population and enterprise criteria was accepted as the number (D) of hgs/sbs to be actually formed. Hamlet-group/sub-block was formed by more or less equalising

Population (P)	No. of hgs/sbs to be formed	No. of non-agricultural enterprises(E)	No. of hgs/sbs to be formed
0 - 1200	1	0 - 120	1
1201 - 1600	4	121 - 160	4
1601 - 2000	5	161 - 200	5
2001 - 2400	6	201 - 240	6
and so on		and so on	

population. Three hgs/sbs were selected - one with the maximum number of DMEs (or with maximum number of NDMEs if there was no DME or with maximum number of OAMEs if there was no DME/NDME in the FSU) or with maximum percentage share of population if there was no manufacturing enterprise in the entire FSU, was always selected and termed as Segment 1; other two were selected circular systematically with equal probability and combined to form Segment 2.

**3.8 Sampling of households (for schedule 1.0):** A thin sample of 4 households was selected from the households listed in the sample village/block for canvassing schedule 1.0. In villages/blocks with hg/sb formation, two households were selected from each of the two segments for this purpose. In case of a shortfall in the required number of households in a particular segment, the quota for the other segment was increased so that a total of 4 households got selected in all. The households were first arranged by their means of livelihood and then the required number of sample households was selected circular systematically with equal probability for each segment of the village/block separately.

### 3.9 Estimation Procedure

#### 3.9.1 Notations:

s = subscript for s-th stratum  
t = subscript for t-th sub-stratum (t=1, 2 or 3)  
m = subscript for sub-sample (m=1,2)  
i = subscript for i-th village/ block(FSUs)  
1 = subscript for segment 1  
2 = subscript for segment 2

j = subscript for j-th enterprise type(j=1 for OAME; j=2 for NDME, j=3 for DME)  
k = subscript for k-th sample enterprise under a particular enterprise type for Sch.2.2 and k-th sample household for Sch.1.0  
D = total no. of h.gs/s.bs formed in the sample village/block  
Z = total size of a stratum/sub-stratum  
z = size of village/block used for selection  
n' = number of sample village/blocks allotted for a particular sub-sample  
n = number of sample villages/blocks surveyed including zero cases for a particular sub-sample  
 $\pi$  'A = inclusion probability for the sample FSU  
E = total no. of enterprises listed for a particular enterprise type in a segment of sample FSU  
e = total no. of enterprises surveyed for a particular enterprise type in a segment of sample FSU  
H = total no. of households listed in a segment of sample FSU  
h = total no. of households surveyed in a segment of sample FSU  
x,y = observed values of characters X,Y under estimation  
 $\hat{X}, \hat{Y}$  = estimate of population total of the characters X, Y

Then  $y_{stmijk}$  = observed value of the character Y for the k-th sample enterprise of the j-th enterprise type belonging to segment-1 of i-th village/block (FSUs) of m-th sub-sample of the t-th sub-stratum of s-th stratum.

3.9.2 **Formulae for estimation for a particular stratum x sub-stratum x sub-sample:** Sch. 1.0:

i) Estimation formula for sub-stratum 1:

$$\hat{Y}_{stm} = \frac{Z_{st}}{n_{stm}} \sum_{i=1}^{n_{stm}} \left[ \frac{H_{stm1i}}{h_{stm1i}} \sum_{k=1}^{h_{stm1i}} y_{stm1ik} + \left( \frac{D_{stm1i}-1}{2} \right) \frac{H_{stm2i}}{h_{stm2i}} \sum_{k=1}^{h_{stm2i}} y_{stm2ik} \right]$$

(t = 1; m = 1, 2)

... .. (A1)

i) Estimation formula for sub-strata 2 & 3:

a) for sub-sample 1:

$$\hat{Y}_{stm} = \sum_{i=1}^{n_{stm}} \frac{1}{\pi_{stm_i}} \left[ \frac{H_{stm1i}}{h_{stm1i}} \sum_{k=1}^{h_{stm1i}} y_{stm1ik} + \left( \frac{D_{stm1i}-1}{2} \right) \frac{H_{stm2i}}{h_{stm2i}} \sum_{k=1}^{h_{stm2i}} y_{stm2ik} \right],$$

(t=2, 3; m=1)

.. .. (A2.1)

b) for sub-sample 2:

$$\hat{Y}_{stm} = A + B, \quad (t = 2, 3; m = 2) \text{ where}$$

$$A = \sum_{i=1}^{n_{stm}} \left[ \frac{H_{stm1i}}{h_{stm1i}} \sum_{k=1}^{h_{stm1i}} y_{stm1ik} + \left( \frac{D_{stm1i}-1}{2} \right) \frac{H_{stm2i}}{h_{stm2i}} \sum_{k=1}^{h_{stm2i}} y_{stm2ik} \right],$$

(t=2, 3; m=1)

and

$$B = \sum_{i=1}^{n_{stm}} \frac{1}{\pi'_{stm_i}} \left[ \frac{H_{stm1i}}{h_{stm1i}} \sum_{k=1}^{h_{stm1i}} y_{stm1ik} + \left( \frac{D_{stm1i}-1}{2} \right) \frac{H_{stm2i}}{h_{stm2i}} \sum_{k=1}^{h_{stm2i}} y_{stm2ik} \right],$$

(t=2, 3; m=2)

.. .. (A2.2)

iii) Estimate for stratum:

$$\hat{Y}_{sm} = \sum_{t=1}^3 \hat{Y}_{stm}, \quad (m=1, 2)$$

.. .. (A3)

### 3.8 Treatment for zero, casualty cases etc.:

3.8.1 While counting number of FSUs (nstm) surveyed in a stratum/sub-stratum all the FSUs with survey codes 3 and 6 (i.e. zero case) for sch.1.0 are also considered. In addition, if no USU is available for a particular schedule in the frame then also that FSU has been treated as surveyed in respect of that schedule. However, if the USUs are available in the frame of the FSU but could not be surveyed then that FSU has been treated as casualty and it was not treated as surveyed.

3.8.2 **Casualty cases:** FSUs with survey code 7 as per sch. 0.0 are treated as casualties. In addition to this, an FSU, although surveyed, may have to be treated as casualties for a particular schedule type and enterprise type as given in the following para;

3.8.2.1 **Sch.1.0:** FSUs with survey codes 1 and 4 having frame households greater than 0 but surveyed households as per the data file as nil, considering both segments together, (i.e.  $H_{stmi\ 1} + H_{stmi\ 2} > 0$  but  $h_{stmi\ 1} + h_{stmi\ 2} = 0$ ) have been taken as casualties. All the FSUs with survey codes 1-6 minus the number of casualties as identified above for sch. 1.0 were taken as the number of surveyed FSUs (nstm) for that stratum x sub-stratum.

When casualty occurs for a particular segment but not for the other segment, the FSU was not treated as casualty but some adjustments in the value of H for the other segment was done as follows:

i) Suppose for segment 1,  $H_{stmi\ 1} > 0$  but  $h_{stmi\ 1} = 0$  while for segment 2,  $H_{stmi\ 2} > 0$  and  $h_{stmi\ 2} > 0$ . In that case  $\frac{D_{stmi} - 1}{2} H_{stmi\ 2}$  was replaced by  $H_{stmi\ 1} + \frac{D_{stmi} - 1}{2} H_{stmi\ 2}$  in the

formula for multiplier of segment 2. Multiplier for segment 1 was 0.

ii) Suppose for segment 1,  $H_{stmi\ 1} > 0$  and  $h_{stmi\ 1} > 0$  while for segment 2,  $H_{stmi\ 2} > 0$  but  $h_{stmi\ 2} = 0$ . In that case  $\frac{H_{stmi\ 1}}{2}$  was replaced by  $H_{stmi\ 1} + \frac{D_{stmi} - 1}{2} H_{stmi\ 2}$

in the formula for multiplier of segment 1. Multiplier for segment 2 was 0.

It may be noted that nstm is always the same for both segments of an FSU.

## Chapter - Four SUMMARY OF FINDINGS

4.0 Some of the important findings of the survey on "Household consumer expenditure" are given in the following paragraph.

4.1 The percentage distribution of households and persons according to monthly per capita expenditure (MPCE) class for rural and urban areas is given in Table No.4.1. It is observed from the table

that the average monthly per capita expenditure for rural and urban areas was Rs.573.44 and Rs.1042.39 respectively. In rural areas about 68 per cent of the persons and about 61 per cent of the households had their monthly per capita expenditure (MPCE) below the respective average expenditure, while in urban areas about 64 per cent of the persons from about 54 per cent of the households had their MPCE

below the respective average expenditure. The average number of persons per household in rural areas was observed to be 4.47 whereas in urban areas it was 4.36. The average number of persons per household was maximum in the lowest MPCE class. While it was minimum in the MPCE class Rs.775-950 in rural areas. Similarly, in urban areas average number of persons per household was maximum in the MPCE class Rs.300-350, whereas it was minimum in the highest MPCE class.

4.2 The average value of consumption (Rs.) by broad groups of items per person for a period of 30 days for rural and urban areas and for the State are given in Table No.4.2.It is seen from the table that the average monthly per capita expenditure for the

State was Rs.753.11. It was Rs.573.44 for rural areas and Rs.1042.39 for urban areas respectively. The monthly per capita expenditure on non-food items for the State was Rs.402.60.For rural and urban areas, it was Rs.278.47 and Rs.602.47 respectively. The monthly per capita expenditure on food items for the State was Rs.350.51. For rural & urban areas, it was Rs.294.97 and Rs.439.93 respectively. It is observed that monthly per capita expenditure on food and non-food items in urban areas is more as compared to State & rural areas. It was also seen from the table that in food items, the maximum expenditure was incurred on cereals, while in non-food items, the maximum expenditure was incurred on miscellaneous goods and services in both the rural & urban areas of the State.

4.3 The percentage distribution of monthly per capita expenditure by broad groups of items for rural and urban areas and for the State is given in Table No.4.3. For the State out of total monthly per capita expenditure 47 per cent expenditure was incurred on food items, while 53 per cent expenditure was

incurred on non-food items. The corresponding figures for rural areas were 51 per cent and 49 per cent respectively. For urban areas these were 42 per cent and 58 per cent respectively. Further, it is observed that the maximum share of total monthly per capita expenditure for food items was on cereals,

milk and milk products, vegetables, edible oil and beverages and refreshment in both the rural & urban areas. The percentage expenditure on food items in rural areas was found to be more than that in urban areas. While on non-food items, the percentage expenditure was found to be less in rural areas as compared to that in urban areas.

4.4 The average per capita quantity (in kg) and value (in Rs.) of consumption of cereals for a period of 30 days for rural and urban areas of the State are given in Table No.4.4. It is observed from the table that in rural areas the quantity of cereals consumed per person for a period of 30 days was 10.32 kg. having a value of Rs.82.77. In urban areas, the

corresponding figures were 9.00 kg. & Rs.99.26 respectively. Wheat was the major cereal item of consumption for both rural (3.49 kg.) & urban (4.60 kg.) areas having a value of Rs.27.98 & Rs.46.95 respectively. It is further observed that the total quantity of cereals consumed per capita was higher in rural areas than that in urban areas, whereas the total value of cereals was found to be higher in urban areas.

4.5 The percentage of expenditure on cereals to total consumer expenditure and percentage of quantity of cereals consumed per person for a period of 30 days by items of cereals for rural and urban areas is given in Table No.4.5. It is seen from the table that the percentage of expenditure on cereals out of total consumer expenditure in rural areas was found to be more than that in urban areas. In rural areas, rice was the major item of expenditure in terms

of percentage, while in urban area wheat was the major item of expenditure. No direct information was collected on the prices of items of cereals in the survey. So dividing the value of consumption of an item by the corresponding quantity gives the average prices of different cereals.

cereals as derived from value and quantity of consumer expenditure for rural and urban areas of the State is given in Table No. 4.6. It is seen that average prices of all cereals were higher in urban areas. An implicit average price (Per kg.) for rice and wheat in rural areas were Rs.10.93 & Rs.8.02 respectively. The corresponding figures in urban areas were Rs.13.41 and Rs.10.21 respectively.

4.6 Average price (per kg.) of different items of

**Chapter-Five**  
**COMPARATIVE PICTURE IN RESPECT OF THE IMPORTANT**  
**CHARACTERISTICS OF CENTRAL & STATE SAMPLE ESTIMATES**

5.0 The State participates in the National Sample Survey Programmes on a matching sample basis. An independent matching sample was drawn for the State for which all steps viz-field work, tabulation etc, were carried out independently. An independent set of results is therefore, available for the State sample. The results from two independent samples namely State & Central Sample, helps not only in increasing the precision of the results by way of combining them but the difference between the two estimates gives also an idea about the magnitude of

the error, due to the sampling of the enquiry. The following paragraphs gives comparison for some important characteristics of the household consumer expenditure.

5.1 The average number of persons per household according to State and Central sample is given in the Table No.5.1. It is observed that the estimated average household size was coinciding with Central sample estimates in the urban area but it is lower in the rural area in State sample as compared to Central sample.

तक्ता क्रमांक/Table No.5.1  
प्रती कुटुंब व्यक्तित्ची सरासरी संख्या  
Average number of persons per household

क्षेत्र/Area		कुटुंबाचा सरासरी आकार/Average household size	
		केंद्र/Central	राज्य/State
(1)	(2)	(3)	
ग्रामीण/Rural		4.9	4.5
नागरी/Urban		4.4	4.4

5.2 Value (Rs.) of consumption of food and non - food items and total expenditure per person for a period of 30 days for both the State & Central sample are given in Table No.5.2. It is seen from the

table that the State sample estimates are on higher side than the Central sample estimates in both the areas; except the expenditure on food in urban areas.

एकूण खर्च/Total expenditure	506.84	573.94	1033.93	1042.39

5.3 Quantity (kg.) and value (Rs.) of consumption of cereals per person for a period of 30 days for Central and State sample are given in the Table No. 5.3. It is seen from the table that Central sample estimates are higher than State sample estimates in terms of quantity & value in both the areas except for the value in rural area.

## Chapter - Six

### COMPARATIVE PICTURE OF SOME IMPORTANT CHARACTERISTICS BASED ON THE STATE SAMPLE RESULTS OF EARLIER ROUNDS AND 56TH ROUND

6.0 The enquiry of household consumer expenditure was conducted in earlier rounds viz. 27th, 32nd, 38th, 42nd to 56th rounds. Amongst these rounds, 27th, 32nd, 38th, 43rd, 50th and 55th round surveys were quinquennial in nature with a large sample size and rest of the survey rounds were having a thin sample. However, in this chapter comparisons of estimates generated from 53rd to 56th rounds are discussed.

6.1 Table No. 6.1 gives the average number of persons per household in rural and urban areas. The average household size in the rural areas goes on increasing from 53rd to 54th round, it remain same in the 54th & 55th round and again it equals to 53rd round. In urban areas average household size remains same except for the 54th round.

तक्ता क्रमांक/Table No.6.1  
प्रती कुटुंब व्यक्तित्ची सरासरी संख्या  
Average number of persons per household

क्षेत्र/Area	फेरी/Round			
	५३वी/53rd	५४वी/54th	५५वी/55th	५६वी/56th
(1)	(2)	(3)	(4)	(5)
ग्रामीण/Rural	4.5	4.7	4.7	4.5
नागरी/Urban	4.4	4.6	4.4	4.4

6.2 Average monthly per capita expenditure (in Rs.) of rural and urban areas are given in Table No. 6.2. It is observed that there is an increasing trend in the

average monthly per capita expenditure in both rural and urban areas of the State except for rural areas in 53rd round.

तक्ता क्रमांक/Table No.6.2

नागरी/Urban	782.09	830.69	885.38	1042.39

6.3 The monthly per capita quantity and value of consumption of cereals in rural and urban areas are given in Table No.6.3. It is observed that the quantity of consumption of cereals per person for a period of 30 days are found to be varying from 53rd

to 56th round in both the areas; whereas the value of consumption in both the areas goes on increasing over round to round except for rural areas in 53rd rounds.

नागरी/Urban	10.55	9.82	11.06	9.52	90.06	92.14	97.91	99.26

6.4 The monthly per capita quantity of consumption of rice and wheat in both the rural & urban areas is given in Table No. 6.4. It is observed that the average monthly per capita quantity of consumption of rice & wheat shows decreasing trend in rural areas; whereas, varying trend was observed in urban areas.

तक्ता क्रमांक/Table No.6.4

6.5 The average monthly per capita expenditure on food & non-food items is given in Table No. 6.5. It is observed that the estimates of average monthly per capita expenditure on food goes on decreasing except for 56th round in rural areas, whereas in urban areas varying trend was observed. The monthly per capita expenditure on non-food items goes on increasing from 53rd to 56th round except for 54th round in both the areas.

## Chapter - Seven EMPLOYMENT AND UNEMPLOYMENT SITUATION

7.0 The employment and unemployment situation as obtained through the 56th round survey is discussed in this chapter alongwith the similar results as obtained through earlier rounds.

7.1 Percentage of employed persons according to 'usual status' and 'current weekly activity status' is given in Table No.7.1. It is observed from the table that according to usual status, varying trend is observed in WPR for rural males from 52nd to 56th round. In case of urban males the WPR has shown

the constant trend of 51 per cent to 52 per cent since 1995-96. The female WPR also shows the varying trend from 52nd to 56th round in the rural areas whereas in the urban areas it has increased from 9.6 in 52nd round to 12.4 in 56th round. Further, in the rural areas for females, the current weekly status estimates of WPRs shows varying trend from 52nd to 56th round; whereas in the urban areas current weekly status shows an increasing trend from 9.2 to 12.4 from 52nd round to 56th round.

55वी/th round is quinquennial round of survey

7.2 Persons employed are categorised into three broad groups according to their status of employment. These groups are (i) self-employed (ii) regular employees and (iii) casual labour. The percentage distribution of the usually employed by category of employment is given in Table No.7.2.

The basic distribution of employed in terms of status of employment shows that half of the employed in rural areas were in the 'self employed' category. The percentage of regular employees was about 11 per cent & 5 per cent for males & females respectively in the rural

areas. The percentage of self-employed in principal status was higher in rural areas for both the males and females as compared to the males and females in the urban areas for every round, whereas the percentage of regular wage and salary earners in the principal status were higher in urban areas for both the males & females in every round as compared to rural areas.

7.3 Two different estimates are obtained from the annual survey data for the 'unemployed' viz. (i) number of persons unemployed based on the usual status classification and (ii) number of persons employed based on current weekly status classification. The first estimate relates to person's unemployment for a relatively longer period during the reference period of 365 days, it approximates to an indicator of the chronic unemployment. Two

estimates of the usually unemployed are presented namely usually unemployed in terms of their principal status (ps) and usually unemployed excluding the subsidiary status of worker (usual adjusted). Some of the unemployed identified on the basis of principal status might be working in a subsidiary capacity. Hence, the unemployment rate derived on the basis of adjusted usual status is expected to be lower than that based on principal status. The other estimates, i.e. the one based on current weekly status, gives the average weekly picture of unemployment during the survey year and covers both chronic unemployment and intermittent unemployment caused by seasonal fluctuation in the employment of those catergorised as usually employed. Unemployment rates (Number of persons unemployed per thousand persons) in the labour force are given in Table No.7.3. It is seen from

the table that the unemployment rates were higher in the urban areas than in the rural areas. Unemployment rates for both the males and females were same for both the 55th and 56th rounds.

7.4 Percentage distribution of the usually unemployed (ps+ss) by their broad current

weekly status is given in table No. 7.4. It is seen that percentage of usually employed males according to current weekly status was same i.e. almost 100 per cent in both rural & urban areas when compared to earlier 55th round. As far as females are concerned these percentages of employed females are 92 & 96 in rural & urban area respectively.

**राष्ट्रीय नमुना पाहणीच्या ५६ व्या फेरीतील (जुलै, २०००- जून, २००१) पत्रक १.० मधील “कुटुंबाचा उपभोग्य बाबींवरील खर्च” या विषयावरील राज्य नमुन्यात गोळा करण्यात आलेल्या आकडेवारीवर आधारित अहवालाचा सारांश**

**१. प्रस्तावना :-** भारत सरकारची राष्ट्रीय नमुना पाहणी (रा.न.पा.) संघटना नियमितपणे राष्ट्रव्यापी सामाजिक व आर्थिक पाहण्या घेत असते. त्यात महाराष्ट्र शासनाचा अनुरूप नमुना तत्वावर सहभाग आहे. रा.न.पा संघटनेच्या नियामक परिषदेने वेळोवेळी घेतलेल्या निर्णयानुसार ‘कुटुंबाचा उपभोग्य बाबींवरील खर्च’ आणि ‘रोजगार व बेरोजगार’ या दोन विषयावर मोठा नमुना आकार घेवून एकत्रितपणे दर पाच वर्षांनी पाहणी घेण्याचे ठरविण्यात आले होते. त्यानुसार रा.न.पा. ५५ वी फेरी (जुलै, १९९९- जून, २०००) मधील पाहणी ही अशा प्रकारची सहावी पाहणी होती. तर रा.न.पा. फेरी क्र. ४२ पासून ‘कुटुंबाचा उपभोग्य बाबींवरील खर्च’ या विषयावर दरवर्षी लहान नमुना आकारामध्ये पाहणी घेण्याचे ठरविण्यात आले होते. त्यानुसार रा.न.पा. ५६ वी फेरी (जुलै, २००० - जून, २००१) ही अशा प्रकारची बारावी फेरी होती. हा अहवाल रा.न.पा.च्या ५६ व्या फेरीतील पत्रक १.० ‘कुटुंबाचा उपभोग्य बाबींवरील खर्च’ या विषयावर आधारित आहे. या अहवालात कुटुंबाच्या उपभोग्य बाबींवरील खर्चाच्या निष्कर्षांच्या अनुषंगाने राज्यातील लोकांचे राहणीमान अभ्यासण्याचा प्रयत्न करण्यात आला आहे.

**२. नमुना आकार :-** या पाहणीसाठी २८८ गावातील व १५३६ नागरी घटकातील एकूण ७२९६ कुटुंबांकडून माहिती गोळा करण्यात आली होती.

**३. महत्वाचे निष्कर्ष :-** या पाहणीमध्ये गोळा केलेल्या माहितीचे तपशीलवार विश्लेषण करून प्राप्त झालेले निष्कर्ष पुढे दिले आहेत.

**३.१ कुटुंबाचा आकार उपभोग्य बाबींवरील दरडोई खर्च व वापर**

कुटुंबाचा राहणीमानाचा दर्जा अभ्यासण्यासाठी ‘दरडोई खर्च’ ही अतिशय महत्वाची संकल्पना आहे. त्यानुसार कुटुंबाचा उपभोग्य बाबींवरील खर्चाच्या गोळा केलेल्या आकडेवारीचे विश्लेषण केले असता महाराष्ट्र राज्याकरीता दरडोई मासिक सरासरी खर्च रु.७५३ असल्याचे आढळून आले. ग्रामीण व नागरी भागातील कुटुंबाचा

दरडोई मासिक सरासरी खर्च अनुक्रमे रु.५७३ व रु.१०४२ असल्याचे निदर्शनास आले. दरडोई मासिक खर्चाच्या वर्गानुसार ग्रामीण भागात ६१ टक्के कुटुंबातील ६८ टक्के व्यक्तींचा खर्च सरासरी खर्चापेक्षा कमी असून नागरी भागात हे प्रमाण ५४ टक्के कुटुंबे व ६४ टक्के व्यक्ती इतके असल्याचे आढळले. ग्रामीण व नागरी भागाकरीता प्रती कुटुंब व्यक्तींची सरासरी संख्या अनुक्रमे ४.४७ व ४.३६ असल्याचे दिसून आले. तसेच राज्यातील ग्रामीण व नागरी या दोन्ही भागात वाढत्या दरडोई मासिक खर्च वर्गानुसार कुटुंबाचा आकार कमी कमी होत असल्याचेही निदर्शनास आले. राज्याच्या ग्रामीण भागातील कुटुंबाने उपभोग्य बाबींवर केलेल्या एकूण खर्चापैकी खाद्यपदार्थ व खाद्येतर पदार्थांवर केलेला खर्च अनुक्रमे रु. २९५ व रु. २७८ असल्याचे आढळले तर नागरी भागासाठी हा खर्च अनुक्रमे रु. ४४० व रु.६०२ असल्याचे दिसून आले. खाद्यपदार्थांवर होणा-या एकूण खर्चापैकी ग्रामीण भागात दुध व दुग्धपदार्थ, भाजीपाला व खाद्यतेल तर नागरी भागात तृणधान्ये, पेये व अल्पाहार, दुध व दुग्धपदार्थ आणि भाजीपाला इत्यादी खाद्यपदार्थांवर जास्त खर्च होत असल्याचे आढळले. तर खाद्येतर पदार्थांवर होणा-या खर्चापैकी ग्रामीण व नागरी या दोन्ही भागात संकिर्ण वस्तू व सेवा यावरील झालेल्या खर्चाचा हिस्सा जास्त असल्याचे दिसून आले. तथापि, ग्रामीण भागाच्या तुलनेत नागरी भागात खाद्य व खाद्येतर पदार्थांवर झालेल्या खर्चाची टक्केवारी जास्त होती. राज्यात खाद्यपदार्थांवर झालेल्या खर्चापैकी तृणधान्यावर अधिक खर्च केल्याचे दिसून आले. तृणधान्यावरील दरडोई वापर व खर्चाच्या आकडेवारीवरून ग्रामीण व नागरी या दोन्ही भागातील कुटुंबाचे ‘गहू’ हे प्रमुख तृणधान्य असल्याचे आढळले व गव्हावरील दरडोई मासिक वापर व खर्च ग्रामीण भागासाठी अनुक्रमे ३.४९ कि.ग्रॅ. व रु. २७.९८ तसेच नागरी भागासाठी अनुक्रमे ४.६० कि.ग्रॅ. व रु. ४६.९५ असल्याने निदर्शनास आले. वापराच्या मूल्य व परिमाण आकडेवारीवरून काढण्यात आलेल्या विविध तृणधान्यांच्या सरासरी किंमतीवरून ग्रामीण भागात ‘तांदूळ’ किंमतीने महाग तर ‘बाजरी’ ही स्वस्त तृणधान्य असल्याचे आढळले. ग्रामीण भागातील तृणधान्यांच्या किंमतीच्या तुलनेत नागरी भागातील तृणधान्यांच्या किंमती १६ ते २७ टक्क्यांनी जास्त असल्याचेही दिसून आले.
